

Our Construction Method is *PROVEN* to Save You Money, Gets You Into Your New House Faster and Delivers a Tight, Solid, Well Built Home

Schake Custom Homes is the only custom home builder in the Tri City area that uses a panelized construction approach.

This is a high tech approach that takes the details from your customized design and in factory controlled conditions pre-engineers and builds the wall, floor and roof sections of your home to precise standards.

Once built they're shipped to your site for final construction and often your home will be weather tight within a few days. Compare that to the traditional methods of framing that can take weeks longer and expose your home to the elements.

3 Reasons Our Clients Love This Construction Process

Money Saver

This common sense method of building reduces the costs to the contractor for materials, overhead and labor. We pass these savings onto you.

Reduces Construction Time

Delays due to weather, material delivery mistakes and labor issues are virtually eliminated. You move into your new home in less time.

Frankly - You Get A Higher Quality Built Home

Using our computer design program a panelized home results in a much more consistent fit and finish. Materials are not exposed to the elements which can often result in warping during construction.

Floor panels, walls and roof structures come together seamlessly which increases the overall insulation and reduces air infiltration into new home once built.

We're one of the few companies in the area that has developed this proven step by step detailed process that works with you every step of the way, keeps your costs under control and delivers your custom home within your budget and on time.

If you're ready to build that home you've always wanted, or you're just thinking about what it takes to get started, I invite you to find out more about how to get started and to talk to about your project so you can make the best decision possible.
